

THE EASY SYSTEM FRAME

PLEASE KEEP THIS INSTRUCTION LEAFLET FOR FUTURE REFERENCE

IMPORTANT INFORMATION

It is extremely important when using the "Easy System" framework to adhere to the following instructions;

- When tensioning the canvas with the frame, ensure that no "inner" pole is extended to its maximum length.
- Note - If you find that any of the poles have jammed and you cannot retract them, it's likely that they have been extended too far and have got jammed. The poles are designed in such a way to stop the inner poles from falling out. In order to achieve this, the end of the inner pole is flattened slightly and it's this that causes it to jam should they be extended too far. To release the pole, simply press the black button and at the same time, push and twist the pole until it releases.
- Always ensure that the extending poles (the ones that slide from within another) are equally extended. This will ensure that as much of the inner pole is left within the outer poles, thus maximizing the frames strength.

A MUST

Always place the pegging ladder under the plastic foot of the leg section before piercing into the ground. This will keep the frame in position and ensure the legs and awning are kept tensioned.

- Do not put too much tension on the intermediate roof and leg supports (sizes 900cm and above) as they are only "support" poles and not "tension" poles.
- Make sure the outer roof poles are positioned at a 45 degree angle to the sewn seams on the side panels of the awning.
- Make sure the adjusting clips are facing away from the awning and do not rotate any of the poles once the frame is assembled.
- Do not allow any of the poles to fall to the ground.
- Do not oil or grease any part of the frame.
- Be careful not to step on any of the poles.
- Do not pack your frame away wet! Prior to storage, it is advisable to always clean and dry the poles.
- Always keep your frame plan; you will need this in the future if any spare parts are required.

If you have any queries regarding any of the above, please feel free to contact us.
